Summary

Skadis mountable hopper for small hot gluesticks

[Hobby & Makers](#) > [Organizers](#)

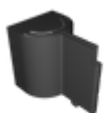

Tags: [glue](#) [hopper](#) [hot](#) [ikea](#) [skadis](#) [stick](#) [storage](#)

Probably gazillion of other versions exist already, but to practice cad, designed my own.

There are gaps to see the glue sticks, because I can already predict that they'll get stuck at the bottle neck once in a while and like this it's easier to notice and smack a few times to unclog it.

Plenty of supports needed and not the quickest print - at 0.3, 20% infill it was around 6 hours.
