The Lite Plus stove can be packed neatly into the pot. But there are few problematic spots with which this protector set helps. The pot peg protector prevents scratching of the lid. The burner protector prevents the lighter pin to be bent, and the valve protector prevents dust getting into the valve. And it was fun experimenting with flex material a bit.

The gas cartridge photo shows two other models: the **valve protector** prevents scratches on the pot bottom (if printed with flex) and the **rattle guard** makes it fit a little bit better.

Print Instructions

The models must be printed with flex material. They squeeze a little into place (or need to be bent a little to get the peg protector on). Print the peg protector with the flat face down.

Printer	MK3s+
Filament	Filatech FilaFlex40
Infill	100%
Supports	None
