The Beechcraft T-6 Texan II is an American Trainer aircraft made to replace the USAF's T-37 and the USN's T-34. This aircraft has had major success being adopted by ten nations, four of which still operate the T-6. This trainer also has light attack variants, such as the AT-6B Wolverine.

I made this as another entry for the Last Meters contest, uses 1.08 meters of filament.

Both Sprue and Sprue-less models included along with models of individual parts. while the fit is relatively snug, glue is recommended.

Print at a .2 mm layer height with 100% infill.
