updated 17. 5. 2022 | published 17. 5. 2022

## Summary

Self watering vase for a single plant, with grow light

[Household](#) > [Outdoor & Garden](#)

Requires:

- 2x Screws (3x12)mm
- 2x wooden posts - 12mm diameter
- 1x Grow light (mine's not one but it would be best)
- Super glue
- Assembly

The hole print takes less than a 5 hours for everything.

U have to super glue the gasket, level stops, and bar stops (for the wood).

To make it waterproof u can either use a plastic bag like me or either paint or resin.

**Hope u enjoy it ^^ !**

**P.S:** The level isn't working as intended, some cork from a wine bottle would work wonders.
