This is a prototype. I'm planning to turn this into a customizable openscad file. The stl files are designed for US pegboard with 1 inch spacing.

I took the pegboard hook from my customizable pegboard hooks and added a honecomb bracket. Paired with a hexoganal rod it makes a nice pegboard pliers rack which prints flat with no support. The rod may need some trimming. It's designed to be a tight fit so no gluing is required. I (carefully) hammered the rods into the brackets using a small craft hammer.
