Summary

Great way to use up the last few meters of a spool. Looks best with neutral colored filaments such as black, white, gray

Great way to use up the last few meters of a spool. Looks best with neutral colored filaments such as black, white, gray, tan, etc. One of these clips takes only 1g, 0.39m, to print! A set of 12 clips takes only 13g, 4.43m, to print!

These are designed to accommodate #6 drywall screws (course thread) as I wanted something that could not only attach to walls, but hold great on ceilings too. I used this to deal with power for lighting in my basement workshop.

I also have a larger version made for cords 9.0mm or less.

For comparison, a thick (14-gauge) power cord on a heavy duty power strip is usually about 9mm in diameter, including the insulation. A thick

power cord on a 4-foot LED shop light is usually about 7.5mm or so, including the insulation.

Printing notes:

I like to print these with the number of walls set to something high, like 12, so they print solid for strength, and print quickly.
