### Summary

Shelf that mounts and rotates HomePod mini, using the wall to help project sound.

Since the HomePod mini's driver fires downward, I opted against using a standard shelf design so that the audio would project against the wall and spread more evenly across the room.

You'll need some M3 nuts and 8 mm socket cap screws, along with a large Command Strip.

There isn't much wiggle room for adjustment once the adhesive sets, so make sure you're happy with the placement of the HomePod mini without removing the Command Strip and starting over. Aim for somewhere in the middle of the wall.
