Wanted to print a candy bowl, so I decided to go with a simple shape, and play around with the settings in PrusaSlicer to give it a cool and unique look! This print has no top or bottom layers, and no perimeters on the inside of the bowl (with the exception of the ring at the top). Printed at 0.15mm layer height to make the inside curve as smooth as possible, but 0.2mm would also work nicely I think. Finally, I decided to use the colour change feature to add the two bands of silver.

This was printed with **colorFabb nGen Silver** and **colorFabb nGen LUX Champagne Gold** on my **MK3S+**.

Here's a video of the bowl to give you a better idea what it looks like from all angles.
