Cali-Dragon!

Is your printer able to produce quality prints? When printing organic models you don't really care about precision and tolerances, you want them to look pretty. This small print allows you to test:

- Surface smoothness (aka layer consistency)
- Stringing
- Small perimeters
- Overhangs
- Ghosting
- Details
- MMU (not tested by myself)

Can be printed with no infill at all.
Check here some printing tips: https://www.mcgybeer.xyz/printing-tips

3MF available with custom seam for PrusaSlicer

*EDIT: Added a Keychain version!! (note the horns may be fragile and tend to break easily if used as a keychain)
