This is the latest (2.0) free version of my Moon City, the updated 3 part assembly version designed as a lamp is available here: <https://www.myminifactory.com/object/3d-print-moon-city-multipart-lamp-edition-87610>

Timelapse:

The Moon City, revisited. The differences to the original:

- Added some details, simplified others for easier printing
- More and better decals on the edges of the moon
- Fully support free, it was possible before but far easier now
- Hollowed out the central tower and made it larger, there's a hole through to the bottom for wiring LEDs
- Made it easier to print in smaller scale and added a loop for hanging as an option
- Other smaller random fixes

This model is based on the original illustration called "Arabian Crescent" by the very talented Chris Kawagiwa: chriskawagiwa.com
