Summary

Remixed to use standard 1/4-20 threads that are common for webcams.

[3D Printers](#) > [3D Printers - Upgrades](#)

Remixed this camera mount for the Ender 3 S1 Pro. I redrew this file to fix a slicing issue I had with thin walls around the screw. This remix allows you to attach a webcam that uses 1/4-20 threads to attach to mount. You can either print the threaded insert or buy on amazon a 1/4-20 metal rod to attach to mount and camera.

Mount - Printed with Pla+; 60mm/s; 25% infill, no support needed

Threaded rod - Recommend printing with a raft or brim as my print keeps getting knocked off at the very top. Print at slow speeds and 100% infill.

This remix is based on

Go Pro style mount for Ender S1 Pro
