This special **Prusa Edition of the TerraPi** SSD Case for the Raspberry Pi is to celebrate the 2 year anniversary of the release of the original TerraPi SSD case.

The model prints without supports in under 2.5 hours. **Best used materials are PETG and PLA** but of course others will do too. This version differs a little from the original. The fan hat and the base have been redesigned to be easier to print on lower end printers.

You will find the detailed BOM, assembly instructions and dimensions in the PDF file.

For those who do not want to source all non-3d printed parts and do not have the required nuts bolts, fan and heat-sinks, we have made them available as a special kit here:

[TerraPi Fan, Heatsinks and Nuts & Bolts Kit \(inux3d.com\)](https://inux3d.com)

You can use any 5v 40x40x10mm fan.

The TerraPi ecosystem also has a power button (here: [TerraPi Power Button \(inux3d.com\)](https://inux3d.com))

Enjoy!
