This is a Cute Dragon figure. There are 2 versions available: vanilla and with already built-in supports. Supports were carefully added manually and thoroughly tested.

Recommended print settings

- layer height: 0.2 mm
- infill: 5% gyroid
- perimeters: 3
- supports: built-in

Scaling down model with supports is not recommended, because it may cause the supports to fail.

Since PrusaSlicer 2.6, **organic supports** can be generated automatically, so I recommend using it if there are problems printing version with built-in supports.
