This two part lightweight and simple model is ideal for 22" x 28" (550x700mm) Poster Paper you can find at your local hobby store although any size will work OR standard printer paper ! Whether you are shooting 3D model pictures on your phone camera, or on your DSLR this backdrop will provide a simple and clean background to let your models shine!

I hope you enjoy and let me know if you have any questions I will be glad to help or correct any issues you find with the models!

Q&A:

Can I print both sides at once?

Yes! On an averaged sized printer like the Prusa mk3 or Ender 3 you can print both sides at the same time if you position the

models and rotate them so they create something that looks like a yin yang symbol

How does this compare to other backdrops?

This model was specifically designed to be as small and lightweight as possible while still delivering great results. This is also why I elected to use cheap and easily available poster board. Finally, this design uses a parametric curve to guide the paper's curve which is the most effective way to avoid seeing the "corner" of the sheet if you were instead to say fold the paper at a 90 degree angle.

Will my question be answered?

Absolutely I will check in frequently and always answer questions. If I believe others would benefit from it as well I will post it in the Q&A!
