Battery Missle Launcher for AAA and AA batteries

This print is split into multiple parts so there are a few details you can print in a different color if you like. The .3mf's are already labeled in my suggested colors, I am looking forward too see your color scheme!

- AA variant holds up to 20 batteries (10 per side)
- AAA variant holds up to 34 batteries (17 per side)
- The missle launcher can rotate 360°

Assembly is pretty straight forward, just put all parts together like in the picture, may use a bit of glue. Dont use glue between the base and the pilot chamber so it can move freely.

You will find the files for the AAA variant in the AAA folder.

Changelog:

- 08/01: Improved the tolerances and fixed the height of the AAA batteries (for anyone who already printed the old AAA version can use the ‘AAA_height fix_shim.stl’ and print it for each battery hole)

Happy printing!
