Simplified 3D model of a human skull, designed by myself to be easily printable on both filament and resin printers.

Filament printing- will need support, can be printed with or without a raft

Resin printing- will need supports and best printed hollow and angled backwards. A drain hole can be placed on the underside of the cranium.

Check out my YouTube Channel (Jimson's Stuff) where I make all sorts of things and also review tech including 3D printers.
