Summary

Store your razor and comb away, let them drain/dry, and protect yourself from accidental cuts with a minimalist stand.

[razorholder](#) [razorstand](#) [safetyrazor](#) [stand](#)

A minimalist stand to hold your razor and comb. Takes up the smallest footprint possible, and allows draining/drying of water from both your razor and comb. Nests your razor at an angle which prevents accidental cuts, by keeping the blades under the razor and away from the base or anything else that could touch them.

PRINTING:

Supports are required for the razor-prop at the top of the print – I suggest tree supports, if you have them. Print in the orientation modeled, with the base on the build plate.
