### Summary

Inspired by vintage radios, this is a place to prop your phone to watch movies or other videos.

I was looking for a way to prop my phone up when watching videos or movies in bed. I didn't want something that looks too industrial... and I wanted it to look kind of cool when I wasn't using it to prop up a phone. I was inspired by vintage radios. There are two versions... one a deeper "shelf" to hold thicker phones or phones in cases. The other is smaller and is perfect for holding a phone without a case. Most files print with minimal or no supports.

There are several files included:

1. Two versions of the radio body (recommend printing on its back with some minor supports to support the shelf "lip")
2. Knob (to be printed twice, no supports)
3. Front screen (no supports)
4. Rear screen (optional... I like the depth the layer of black gives when behind the front screen, no supports)

5. Antenna mount (no supports, recommend printing with small layers to avoid needing to sand too much to achieve a smooth rounded look)
6. Antenna (to be printed twice, recommend printing on its side with supports); The antennas can be glued to the mount or not. If you do not glue them, you can wiggle the antennas around a bit like we used to do in the old days to get a better signal. Totally optional but kind of fun.

I can imagine this looks really great in a stained wood filament for the main body and silk gold or bronze for the accessories. For the example make, I've gone for more of a synth wave / 90s feel with blue and pink.

Enjoy! If you like this and want to buy me a cup of coffee, you can find me on venmo at @Preston-moore-7
