Ever wanted an articulated millipede toy that you could 3D print and not need any supports or any assembly and works straight off the bed?

Well here he is.

FDM millipede printed in Snolabs Black Amethyst PLA+. 2 layer height, 10% infill and 1.2mm wall thickness. Ensure you have good bed adhesion and this little fellow will think about taking a walk before he's finished. That said, I didn't need to use a brim.

Resin Millpede printed using Siraya Tech Fast resin at a 0.05 layer height.

Print and go.
