Summary

Plastic piece to hold the spring against the piezo sensor on the back of the drum pad

[Gadgets](#) > [Video Games](#)

Plastic piece to hold the spring against the piezo sensor on the back of the drum pad. Allows use of some pads on older drum sets. Some drum set pads (The Beatles Rock Band) the black plastic piece on the back of the yellow and blue pads is much longer and doesn't allow the pads to sit or move properly when used on older drum sets that don't have the hole cut out for them. This is a model based on the retainer on the red and green pads so you can use a replacement pad set that uses the black 4 screw retainers instead of the orange 2 screw retainers.
