Summary

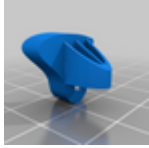

Flywoo Explorer LR -- arm protector with feet. Gives it a flat spot to sit and a little bit of protection, maybe?

[Hobby & Makers](#) > [RC & Robotics](#)

Flywoo Explorer LR. I liked the protector with feet. However, printing them was difficult, so I made a flat spot so they can be (more) easily printed. My TPU settings aren't great, but include the .3mf so at least you don't have to mirror them and can see exactly what I did.

I also needed the caddx peanut holder to hold the charger as well. This is a bit of a tight fit, I put the charger on the peanut and slide it in that way and it just bends the TPU and holds it quite well. I did end up using the 2s-6s buck that comes with it.
