This is a remix of <https://www.thingiverse.com/thing:4921670> to make the mounts fit on the side of an Ikea LACK table. I also designed two spacers to give ample clearance for the GPIO extender. On the original model I could never get the print in place hinges to work properly so I just “broke” and separated them and then used an M5 bolt with two M5 nuts to create a much more stable hinge. The mounts themselves take M3 bolts, print in .2 with 38% infill.
