## Summary

tpu and pla mallet

---

[Hobby & Makers](#) > [Tools](#)

---

dead (rubber) mallet

i made the head with tpu at 40% infill so that its a bit flexible and handle pla with 60% infill to give it a bit of strength . i used a drop of glue to fix head to handle .originally made for my grandkids but i liked it that much i made another one for my self ,i use it mainly to knock off my prints that are stuck to my glass bed of my printer
