Summary

If you don't have a Laser Cutter or a Jigsaw, here is the printable version!

If you instead of laser cutting or jig sawing my original toy horse design, want to print it on your 3D printer, here is a printable version.

It fits on a 300x300mm print bed (minimum is about 295x295) if you rotate it right, and it uses a 24/25mm or 1" round dowel/broom shaft.

Print the two sides and assemble with glue.

It has a cutout to glue in a mane made out of yarn, which is what I personally prefer, just use hot glue and add some yarn, and because of that, it needs a bit of support on each side.

The slot can also be used to glue in the printable mane which I recommend printing in a soft TPU. The printable mane also fits on a 300x300mm print bed.

I deliberately left out any facial features of the horse, to let you paint it as you like, make it unique and add individuality to each horse.

This remix is based on

Laser cut toy horse
