Summary

Replaces the base for a spring lamp. I don't have the original base so this includes a hole for an M4 nut.

Recommend printing with the back side against the plate so the layers are vertical when upright. Had a couple failures caused by a layer being ripped off (It does have constant spring tension after all).

You may need to create your own adapter for the heavy base. I don't have the original base so I used an bike flywheel (points for reusing).
