Tags: [airtag](#) [luggagetag](#) [nametag](#)

This is an easy-to-print universally usable Airtag holder which can be easily customized with custom names, address etc. just Pressfit the Airtag on the backside slot and you are good to go!

Simply open the .f3d file and edit the second sketch containing the name. You can also glue a Paperlabel with your address on the backside when used as a luggagetag, for instance.

Fits all types of keyrings and zipties and should withstand a lot of force if printed with 5 perimeters.

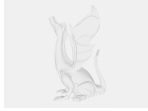

Prints fine with PETG, ASA and PLA and probably with other materials as well.
