### Summary

A handy palmable keyring, that also holds an Airtag.

I was using two different keyring styles to hold my keys, but I found that this 3D print combined both an AirTag holder and something a bit meatier for grabbing your entire set of keys.

It's perfect because it fits into the hand so well.

It has a hole for a 20mm keyring. If you pause the print at the right layer height you can trap a keyring inside.
