10cmx10cm Lithophane holder based on the IKEA BORRBY.

I recommend using <https://3dp.rocks/lithophane/> to design your own lithophanes.

The model has 4 recesses to place **battery powered tealights** in.

It's printed in 3 parts to avoid the need for support materials.

### Post-Printing

Tier 1 and tier 2 are separated to make it printable without supports, glue them together with some super glue after printing.

The Base and the upper tiers can be separated to replace the lithophanes, but these can also be glued together if desired.
