### Summary:

This is handy kitchen organizer for on my door below the sink. Its held in place with double sided tape wich if you have a good one is strong enough for my use case. The organizers are detachable to clean them and make your own custom combination. Each model has a certain amount of "tabs" the full rail has 12 slots for these.

### Files:

I added my fusion 360 file so you can very easily change the size of the individual organizers! if the size's are fine like this you can just download the STL files.

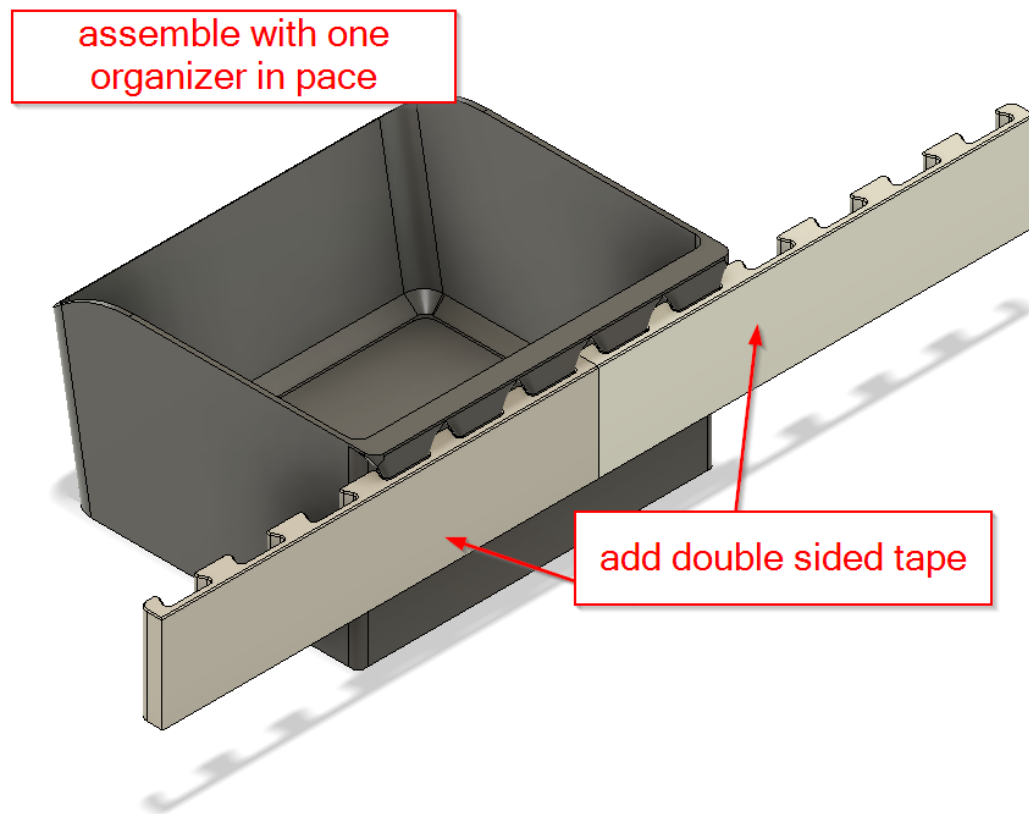

I also added "mod-..." files to make something like the picture below. you can check this out in the added prusa slicer .3MF file :)

**Assembly:**

as shown in the pictures i find the best way to attach this to the door is with good double sided tape since i dont want to damage the door.

To make sure the 2 rails align its best to attach one organizer to it an then attach it to the door. (as shown in pictures)

Also if you still want to attach this with screws you are free to change the files with the added fuison 360 file!
