Summary

AirTag case for a bicycle that is made to look like a cable spacer

I noticed that most of the concealed AirTag cases either involve a keychain or a pole clamp design. I wanted to create something that potential thieves are not yet familiar with. So I made it look like a cable spacer. I also wanted to make it easy to print and modify, thus the simple design. Print needs 2 identical parts. So either print the model twice or duplicate it in the slicer. When put together they form the “case” for the AirTag. Zip ties can be used through the holes to secure the case to any kind of a cable. Zip ties also keep the 2 parts of the case together and tightly shut.
