I recently finished a big Dart Zone Pro Mk3 mod. During the build, I wired in a voltmeter from Foam Pro Shop and wanted to mount it where the insert is to the right of the battery tray. Scope7Tango on Thingiverse had already done a great job of modelling the DZP Mk3's inserts. All I needed to do was add in a cutout for the LED display and make a small hole for securing the meter with a motor screw. There was quite a bit of shell cutting involved underneath the insert.

### Print Settings

#### Printer:

Prusa Mini

#### Rafts:

No

### Supports:

No

### Resolution:

0.2mm

### Infill:

100%

### Filament:

Amazon Basics PLA

Translucent Orange

Category: Mechanical Toys
