this is a psu stop block modified from the oem version provided by [elegoo](#) to work with the wonderful mod made for the ender 3 by [teaching tech](#) to allow all electronics to be moved to the back, you would use the bottom portion labelled mks gen I as the board for the elegoo neptune 2 series printers is a knock off of the mks boards the body works perfectly with some slight modifications to the usb port hole, i just shaved it with a razor blade to make it fit, you will need to remove the screen for that but if your looking at using this youve likely already moved the printer to klipper or octoprint for remote printing purposes
