[showercabin](#)

I have an old shower cabin and it's original handles broke. Sadly, I couldn't find original parts (because it's an old cabin that came without spare parts), so I had to design my own handles.

I used the old handle's screws to mount it to the cabin, it fits. I also have designed some plugs, so the screws are not rusting (I added a little bit of hot glue, so it stays in place).
