updated 15. 1. 2023 | published 15. 1. 2023

### Summary

Two mounts with holes that line up on a piece 160x40 profile and then two other holes fit the G-Belt controler enclosure

1/15/2022 Updated with slightly wider M4 G-Belt holes and opened up the M5 holes a bit.

This matches the 4 bolt holes of the G-Belt and has M5 bolt holes to fit T-nuts into a piece of 160x40 profile frame for a SimLab P1 rig or similar.

It requires melting in threaded inserts for the 4 x bolt holes in the G-Belt.
