A friend needed a medical warning bracelet. Medal ones interact with his skin. He is a big man and needed it to be 10". I created the warning plate in Fusion360 along with both parts of the clasp. These were imported directly into NetFabb.

I next downloaded (into NetFabb) "Maker Tie" by itsamewolf. I selected the link with the design needed. Using Netfabb's cut feature, I separated the one link (keeping the connectors on each side), and duplicated it. Next the Warning Plate was centered with links on each side, then the clasp ends in appropriate place and used the Boolean Operators to combine. (Note, each part had to be repaired in NetFabb individually before join together.

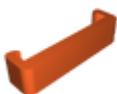

I printed with .04 Nozzle, .15 layer, no Brim nor support. Make sure bed is clean with good adhesion. I put the color change at about 5.5. Printed in PLA using Prusament and Kingroon.
