This is a dashboard switch-hole cover plate for various older Toyota trucks and SUVs. The original came from [the other thingi site, item number 2446920 by bgsteveg](#). I improved it by adding some gussets to keep the tabs from cracking off.

Two additional STLs are included that have cutouts for one or two KCD11 rocker switches. This enables the use of inexpensive switches for automotive use.

This should be printed in ABS, ASA, or some other high-temp plastic, since it would get soft and saggy at high temperatures in a truck cabin. I printed this face down with no supports from ABS, however I recommend this be printed on its side with supports to make the print a little stronger at the base of the tab.

I added a photo of the essentially identical Toyota OEM part for comparison.
