As a designer I don't like my parts to just look functional. So I designed a new bracket for mounting the BL-Touch on my Ender 5.

This bracket can be disassembled from the hotend carriage without having to take the BL-Touch off the bracket, making it more maintenance friendly!

IMPORTANT... Print it with support to build plate!

There are slots on the bottom to fit it flush over the stock fan casing

Settings in Marlin:

```
"#define X_PROBE_OFFSET_FROM_EXTRUDER -45"
```

```
"#define Y_PROBE_OFFSET_FROM_EXTRUDER -17"
```

Print Settings

Printer Brand:

Creality
