This is a simple cover for the Razer Kiyo that you just drop on top of the webcam. When you need to use your webcam, it slides right off.

My inspiration for this design was the idea of dropping a cloth over an object to cover it. I don't want to fuss with the cover when I'm starting a video call and need to remove it quickly.

Also, I can put the cover on my desk next to my keyboard/mouse. A cover is pretty useless if you forget to put it on, and I will absolutely forget if it's not staring me in the face.

If you're wondering why I've printed it in transparent plastic, that's so that I can see the white light that turns on when the camera is in use. The camera can't see through it since the layers of plastic obscure its vision.

I printed it with two shells and no infill.
