Summary

EVA 3 mounting bracket for EBB42 / HUVUD / FLY-SHT or any other board meant for a 42mm stepper

Tags: [ebb42](#) [eva](#) [eva3](#) [huvud](#)

This replaces the EVA cable guide mount with a frame to attach a board meant for a 42mm stepper such as a BigTreeTech EBB42.

If you are running input shaper on klipper you will need to set axes_map: z, x, -y

This does mean that there is no longer a place to anchor the wiring to. I initially zip tied the wiring to the reverse bowden tube, but this proved to be too heavy. I now have the bowden tube and wires in a sleeve being supported on a string and this is working well.

This remix is based on

EVA 3 - Modular 3D Printer carriage platform
