Airtag holder built to fit inside a Trek Domane with integrated downtube storage. Uses a cable tie to hold in place. Does not interfere with the opening or closing (but by fractions of a millimetre!)

Perfect spot to set and forget the Airtag to keep it out of view and out of the way, but easily accessible.

Airtag clips in and out with just thumb pressure and does not rattle. Thanks to Xuis for their original perfect fit Airtag which I've marked this as a remix of.

This remix is based on

Apple AirTag Model from Official Apple Specifications
