These are the legs for the Cherry LPOS (point-of-sale) keyboards. These legs were either getting broken or lost by some of our cashiers. You need two of them for one keyboard.

Cherry will send you some if you call or email and ask nice, but I wanted to have the ability to create my own on short notice. I am an Openscad novice, so forgive any poor programming.

So far, these seem to work okay in the keyboards. Any color works, but pink stands out well from the black keyboards.
