#### Itty Bitty Vacuum

The ITTY BITTY VACUUM is great for everyone who needs to suck up small powdery type material. You may have seen similar items posted on web retailers as "energy powder dosificator tool" but those are cheap knock offs, designed by some mouth breather in a dark damp room.

This, ITTY BITTY VACUUM is the real thing with many benefits compared to cheap competitors!

\*Rugged Design

\*a smooth round top to protect user from small cuts

\*a curved funnel design on the inside to help the user suck up the 'dirty little mess' with ease

\*requieres no electricity!

\*easy to use!

Fabrication tips:

\*Pla is fine, or even better, use a glow in the dark filament

\*print it standing up vertically

\*do not print with brim/raft/skirt or other adhesion methods, it will just make it harder to clean up

\*12% infill seems more than plenty. 20% infill if the user is clumsy ;)  
\*Lightly sanding, and rinsing with cold water is recommended to prevent any stringyness or roughness on the surfaces (which may cause the vacuumed material to get stuck)
