Hello world! I'm 2 weeks into my 3dprinting journey and this is the first model that I've made that I thought might actually be of use to someone else. I printed on **Ender 3 v2** using PLA but you could definitely use PETG or something else if you wanted it to be stronger and more heat resistant.

This Fits a 1inch PVC perfectly and has holes for mounting a zip tie through it and into your coro prop(or anything really) we are using these for halloween and christmas pixel props this year.

I recommend printing these with this fast profile I got from thangs made by Chep ([https://thangs.com/designer/CHEP/3d-model/Cura%20V5.1%20ExtraFast%20\(0.28\)%20Profile%20from%20Filament%20Friday-22486](https://thangs.com/designer/CHEP/3d-model/Cura%20V5.1%20ExtraFast%20(0.28)%20Profile%20from%20Filament%20Friday-22486)) it cut my print time in HALF, and honestly barely looks any worse than my normal prints but its perfect for simple shapes that are just for function, kudos to Chep!

I used supports just to make sure I got a nice solid ring for rigidity but I bet these would print fine without supports but I have not tried it yet. Thanks for checking my model out!
