### Summary

Extended feet for the Ender 5 or similar printers that allow a larger stepper motor to be used on the z axis

---

These feet replace the factory feet and adds extra clearance under the printer. There are two models, one adds 4 mm and the other adds 6 mm of clearance compared to the stock feet. I made these so I could use a larger z-axis stepper motor to fix the falling bed on my Ender 5.

No extra hardware is required. Just remove the old feet with the hex key that comes with the printer and use the same bolt to attach the extended feet.
