Inspired by a mount I saw that was for the vacuum when it's unfolded (tall, in the vacuuming position). That didn't reach out far from the wall.

This mounts the vacuum far enough away from the wall that it fits when in the folded position.

Also has a little hook area for holding the charging cord plug when the vacuum is not mounted. (I stole that idea from that mount I saw as well, good idea!)

Print instructions

I printed at 0.3mm DRAFT settings for Prusament PETG (I used Overture Clear PETG), but changed perimeter count to 5.

5% infill - seems like not much for such a heavy vacuum, but the strength of the part is all in the perimeters. Part seems strong enough to drive a car over.

You'll need two normal sized screws to mount it to the wall - I used drywall anchors and their included screws.
