### Summary

Ender 3 Pro feet to reduce noise; fits onto the stock rubber feet.

A remix of [thing:3520264](#) that removes the silicone button slots (they were too small) and widens the two pieces.

Print both part A and B for each corner of the printer (4 of each).

**Add 4 silicone feet for each of the 4 corners of the printer.**  
(however, I've seen most people use this without them and get good results)
