This is simple wrench for removing/tightening the fuel filter housing cap on a Holden RC Colorado and Isuzu DMax (2008-2011), where the filter is located underneath the vehicle next to the LHS chassis rail. The wrench has a hex nut of 50mm to slip over the filter housing cap once the sensor wire is removed, and the short handle allows it to fit between the chassis rail & torsion bar and turn approx 70deg

The label on the filter advises tightening to 25Nm of torque. I wasn't sure what infill should be okay but to be confident with the wrench strength, I set my print to 40% infill, 5 perimeters, 5 Top/Bottom layers and there was only minimal bending of the tool/handle when used.
