### Summary

Case for a handwired Planck-style Mechanical keyboard. The USB cable slot is on the left side of the keyboard.

No supports necessary, but due to the large size there might be some warping. The switch-late came out not completely flat for me, but that was not an issue because it pulls itself straight when you screw the case together.

The USB cable attaches to the left side of the keyboard, so that it can be conveniently be used with a tablet like an iPad.

To assemble the case you need six heat inserts for M3 screws and 6 M3 screws of a suitable length.
