Summary

I got a message from a friend with a video showing to put over the air outlet in the car to cool of your privates.

[summer](#) [v70](#) [volvo](#) [winter](#) [s80](#)

As the summary states, this is something i remixed, but is an original to fit specific car model and i put it togheter in Fusion360.

All the measurments are taken from my own Volvo V70 D4 2013, at the air outlet on the left hand side of the steering wheel, above the controller for the headlights.

It's the version 1 that i got printed and working on the version 2 as we speak.

The idea is to be able to cool down your privates parts during a hot summer day, OR heat your privates a cold winder day.
