### Summary

The travelling cap for the Timemore - Chestnut C2 coffee grinder.

[Household](#) > [Kitchen](#)

Tags: [coffee](#) [coffee grinder](#) [timemore](#)

Minimized travelling cap for the Timemore - Chestnut C2 coffee grinder designed to be aligned with the top of the coffee grinder barrel not to consume any more space and to save the filament. The cap should prevent remaining coffee bits from the grinder and any undesirable objects into the grinder, which could potentially damage the grinding stones inside.

The cap fits quite precisely preventing the cap from falling out easily. However, if turned upside down, it naturally falls out (with a little help). This would be prevented by inserting or glueing a small magnet somewhere to the cap.

Printed version (in the photo) personalized by adding the initials of the author (not included in the model itself). Material used Prusament - PLA Galaxy Black by Prusa.
